However, if you would like to share the information in this article, you may use the link below: PDFs are everywhere - from forms and contracts to manuals, design proofs, event tickets, and more. If you want to get something done, chances are you'll be loading a PDF. The file format is ideal for preserving layouts and formatting, but tricky to edit without the right tools. Adobe Acrobat is the standard choice - but here's the good news: you can make basic edits without paying a penny. While Acrobat Pro offers advanced features, Adobe also provides free tools that cover more than many users expect, putting it among the best PDF editors. With Adobe Acrobat Reader and Adobe's online PDF editor, you can add comments, fill out forms, insert text, and even sign documents - all for free. Today, we're taking a look at how to make the most of free Acrobat on both Windows and macOS. Apple provides its own PDF reader in the Preview app, but Acrobat does still have some advantages. What you can and can't do with free Acrobat Adobe Acrobat Reader is the free desktop version of Acrobat, available for both Windows and macOS. You can download it by clicking here. While it doesn't offer full document editing like its paid counterpart, it still provides a range of useful tools for working with PDFs, especially when it comes to annotations, forms, and signatures. Sign up to the TechRadar Pro newsletter to get all the top news, opinion, features and guidance your business needs to succeed! With Acrobat Reader, you can highlight text, underline or strike through content, and leave comments or sticky notes throughout a document, all of which are useful features. It's also ideal for filling out interactive forms, ticking checkboxes, and typing into designated fields. The Fill & Sign feature makes it easy to add your signature or initials without printing anything out. However, there are clear limitations. You can't use the free version to edit the original text in a PDF, rearrange pages, replace images, or insert entirely new paragraphs. Things like converting PDFs to Word or Excel, combining multiple PDFs into one, or removing watermarks, are also restricted to the paid Acrobat Pro. It's worth noting that the free desktop version offers identical functionality on Windows and macOS, though macOS users often default to Preview for basic annotations. Still, if you've already downloaded Acrobat Reader or prefer Adobe's ecosystem, it can serve as a reliable tool for most surface-level edits. (Image credit: Future) Using Acrobat online If you don't want to (or can't) install any software, Adobe has an online PDF editor here, and it's one of the easiest ways to make quick edits for free. Available directly via a browser, it lets you upload a PDF, make a few changes, and download the result - all without paying or starting a trial. Pretty neat. To get started, head to Adobe's online editor, click the Edit PDF button, then upload your file from your device or cloud storage. Once the PDF loads, a selection of tools appears, including options to add text, highlight areas, draw with a freehand pen, or insert shapes and annotations. The experience is streamlined and beginner-friendly. You can drag elements into place, type directly onto the page, and highlight or underline existing content. Once you're finished, simply download the edited PDF or share it via a link. There are a few limitations to be aware of. For larger files or repeated use, Adobe may prompt you to sign in with an Adobe account, and some features, like exporting to other formats or reorganising pages, are locked behind a paywall. (Image credit: Future) How to edit PDFs If you've installed Adobe Acrobat Reader on your Windows PC or Mac, you'll find several built-in tools that allow for light editing and document interaction, particularly through the Comment and Fill & Sign features. These don't let you rewrite the original PDF content, but they do offer a practical set of functions for marking up and filling out documents, which can be useful for signing contracts. To start, open your PDF in the app. From the toolbar, click on Comment to access a range of markup options. You can highlight text, underline or strike through words, add sticky notes, and draw shapes or freehand lines. The Fill & Sign tool is where Acrobat Reader becomes especially handy, letting you add text to empty fields, check boxes, and insert your signature or initials using a trackpad, mouse, or stored image. It's worth noting that while the interface differs slightly between Windows and macOS, the tools themselves work the same way. Mac users might prefer Apple's built-in Preview app for simple annotations, but Acrobat Reader offers a more consistent cross-platform experience, especially when working with forms or collaborating. Just keep in mind that these tools don't let you delete or replace text, adjust formatting, or insert images as those features are reserved for the paid version. (Image credit: Parallels) Acrobat alternatives If Acrobat's free tools don't cover your needs, there are several solid alternatives that can help, especially for editing text or rearranging pages. Windows users can use Microsoft Edge's built-in PDF reader to highlight text, add comments, and draw directly on documents, while on macOS, the Preview app offers similar tools for annotation and signing, and comes pre-installed by Apple. For more control, LibreOffice Draw (available on Windows, macOS, and Linux) can open PDFs and treat them more like Word documents - useful for editing or repositioning content. Online tools like Sejda and PDF24 also offer free PDF editing, page reordering, and merging, though they usually come with daily limits or file size caps. (Image credit: Future) Do I need Acrobat Pro? Anyone looking for some heavy-duty PDF editing likely won't be satisfied with Adobe's free version of Acrobat. If you need to edit text and images, convert PDFs to Word or Excel, combine multiple PDFs, reorder pages, or apply watermarks, then you'll be looking at getting the Pro version. At the time of writing, Adobe offers a seven-day free trial of Acrobat Pro. During the trial, you get full access to all tools across desktop and web, with the option to cancel before any charges apply. Just be aware that you need to sign in with an Adobe account and provide payment details upfront. FAQs and troubleshooting You don't need to pay for Adobe Acrobat Pro to make useful changes to a PDF. With Adobe's free tools, either through Acrobat Reader or the online editor, you can comment, highlight text, fill out forms, and even sign documents with ease. For most light edits, that's all you need. But when it comes to modifying the actual content, combining files, or converting formats, you'll run into Pro-only features, which come at a cost. To close out, let's take a look at some Acrobat FAQs that you might have. Can I delete or reorder pages in a PDF for free? Not with Acrobat Reader or the free online tools, which requires Acrobat Pro. However, some third-party tools like PDF24 or Sejda offer limited free options. Can I edit scanned PDFs using free tools? Only partially. Acrobat Pro includes OCR (optical character recognition) for making scanned text editable. Free tools generally let you annotate or overlay content, but not edit the original scan. Why is Adobe asking me to subscribe? Some features, like editing original text, exporting to Word, or combining PDFs, are locked behind a subscription. Adobe may prompt you to upgrade even if you're just previewing a file. Can I edit PDFs on mobile for free? Yes, the Adobe Acrobat Reader mobile app allows you to comment, fill forms, and sign documents. For deeper edits, though, you'll need a Pro subscription. PDFFiller is an online PDF form filler and editor that has been on the market since 2006. It allows you to not only fill out PDF documents, sign them and send them out but also to host them on your own website complete with the ability for people to do the same. Today, I'm going to share with you my PDFFiller Review. I first came across PDFFiller when they reached out to me to ask if I was interested in taking a look at their software. Being a long-time DocuSign user, I was eager to check out an alternative and see if it met my needs. I'm glad I did. PDFFiller is significantly easier to use and felt far faster in my time using the software. For the purposes of this PDFFiller review, I've used a W8 form from the IRS (something I often have to fill out being Canadian and working with US companies). When you first log into PDFFiller, you'll be greeted with this screen: To add a document, simply click on the Add New Form button. Now upload your document to PDFFiller and it will instantly be available for you to fill out. Now that you've uploaded your PDF document, just click in the fields and fill out the information required. It's as easy as clicking and typing. Once you've filled out the form, it's time to move to the signature stage. Adding a signature is incredibly easy; you can type one out, draw it with your mouse, use a touch screen device (if you have one), capture a signature or upload one. In my case, I chose to draw one with my mouse, which I find is as close as I can get to real life. In this instance, I'm using a fake name so I'll just sign the document as "Joe". That's all there is to the signing and filling out process. Pretty simple isn't it? Let's take a quick look at a few other slick features you get with PDFFiller. Adding a watermark to documents is always handy and doing so simply requires you clicking on the watermark tab on the right side of the screen and creating yours. This is incredibly handy for those of us who want to show people how a form should be completed but don't want it to be re-used elsewhere else. Adding in a SAMPLE or VOID watermark is useful. Adding even more features, PDFFiller also allows you to spell check your document. Of course, it can only spell check the information you've typed out but it's a great feature to make sure you haven't made any mistakes on your form. To enable it, simply flick the switch as shown below. Once you've finished with your document, it's time to send it off. You have a slew of options such as printing it, saving it as Word or PDF, emailing, faxing, SMS and more. There you have it, as you can see, it's a very easy-to-use piece of software and incredibly handy for busy professionals who don't have printers with them on the road. Last but not least, they have one feature I can see people using on their websites that is incredibly handy, the ability to share a document that can be filled out and signed by visitors to your website. Check out the video below to see how it works: Simply sign up for an account with PDFFiller and you'll be well on your way to signing contracts, PDFs and more. They also have handy iOS and Android apps that are just as easy to use. 1 Open the Acrobat software program after installation and set up. If you are working with a newer version of Adobe Acrobat, you may see a Welcome Window that offers two main choices: opening a recent file or creating a PDF. If your version doesn't have a Welcome Window, you can get started by choosing the "Create" option under "File" on the toolbar. 2 Create a PDF by clicking on that option. A dialogue box opens that allows you to choose the document that you want to convert to a PDF file. A drop-down window shows the many file formats that can be converted to PDFs. Advertisement 3 Generate a PDF Portfolio, a way to store documents, when you click on "Create PDF Portfolio." Select from 5 available layout options or import a custom layout for your portfolio. Click "Add Files" to begin adding files to the portfolio. Make modifications to the portfolio as needed. Save your PDF file. 4 Combine individual PDF files into a single document by choosing "Combine Files into PDF." When a dialogue box opens, choose "Add Files." After selecting files, click "Combine Files." The new PDF document opens with bookmarks for each original file. 5 Make a PDF form when you select "Create PDF Form." A dialogue box opens that allows you to choose the source, either an open document, choosing a document or scanning a form. Make your choice and click "Next." Adobe Acrobat will convert the form to a PDF and then take you to the form editing page. Make the form modifications needed before saving your new PDF form. 6 Edit PDFs by opening the document you want to edit.[1] 7 If you are using Acrobat X, click on the Tools pane on the right side of the toolbar. For previous versions, choose the "Tools" or "Advanced" option on the main toolbar. 8 Choose the page editing options you're interested in: rotate, delete, extract, replace, crop or split a page in a document. You can also insert pages or alter the page design in page editing. 9 Change content by editing PDFs from the Tools pane. Content editing options allow you to add a bookmark or attach files, edit objects and text and edit interactive objects in your PDF file.[2] Highlight text and right-click to make formatting changes to text. 10 Collaborate with others through the following options: Shared reviews allow a user to set up and invite reviews. Reviewers can comment on each other's reviews. Use Acrobat Connect/Collaborate Live (add-on software) to choose the "Start Meeting" button and have a real-time web conference for up to 15 people. 11 Add multimedia options to PDF files. Sound, movies and multimedia presentations can be embedded or integrated within PDFs. Choose "Tools" from your toolbar or tools task pane. Under "Advanced Editing/Add or Edit Interactive Object->Multimedia," you will find options for Sound and Movies. Draw a rectangle in the PDF to show when you want the specific multimedia tool to operate. Find the sound or movie file you want to use. Make certain "Embed Content in Document" is checked. Click "OK." Advertisement Add New Question Question How can I change font size of a cut and pasted document? Select the text like you did when you copied it. While all the text is highlighted, change the font (top left "F") to the size required, and all highlighted text will change to that font. Question How do I delete part of a page? You can't delete a part of a page. Question How do I get the Adobe tool bar on my tool bar? Just pin it to your tool bar by right-clicking it and clicking "Pin to taskbar."
