What to Know About Online MBA in Supply Chain Management Coursework A master's degree in supply chain management trains students for leadership roles in several industries. They build leadership skills to work at the management level. And depending on the program, MBA students often take core classes in business, management, finance, and marketing to receive a well-rounded business education. The class builds a career-ready skill for professionals in any area of supply chain management. Supply Chain Management Leadership Graduates with a master's in supply chain management act as leaders in their field, taking on management roles in different organizations. The class covers leadership skills required for supply chain managers, including building effective teams, communication skills, and decision making in logistics. Students also study management techniques to prepare for roles in supply chain management. Operations Management In operations management courses, graduate students learn to analyze an organization's operations, including the supply chain process. Strategic Procurement Classes in strategic procurement explore the role of procurement in the supply chain. Graduate students learn to design a procurement strategy to meet the organization's goals. The course covers topics in supplier relationships, the bidding process, price analysis, and purchasing contracts. The course prepares graduates for roles like procurement manager. What Specializations are Available in an MBA in Supply Chain Management Program? Students earning a master's in supply chain management often specialize their education through a concentration or electives. Concentrations like global supply chain management, transportation management, and manufacturing prepare students for different career paths after graduation by offering specialized training. By selecting a concentration or designing one through electives, graduates demonstrate their specialized training in the job market. As companies increasingly operate in a global environment, supply chain managers must bring a global perspective. The concentration trains graduate students in global business practices, international transportation, and the import/export process. They also learn about global regulations, the global economy, and the best practices for global logistics. Transportation managers oversee the process of distribution for a good or service to customers and clients. In a transportation management concentration, graduate students explore the distribution process from a supply chain perspective. They study models of transportation, technological advantages, and regulations governing national and transnational transportation. Within supply chain management, some graduate students specialize in the manufacturing sector, including production management. Students study the production process, including material procurement and inventory management. The concentration also covers management skills, distribution, and the connection between production management and the broader supply chain. What Exams or Projects Should I Expect? During a master's in supply chain management, graduate students complete multiple group projects, research assignments, and presentations to build their skills. Classes design projects and exams to test student knowledge throughout the degree, strengthening abilities that graduates need in supply chain management careers. Many programs conclude with a capstone project that integrates knowledge and skills gained through the curriculum. Graduate students design a project that fits their career path. For example, master's students may analyze a real supply chain to identify problems and propose solutions. Students interested in operations analysis may conduct an operations process review. How Can I Choose a Quality Online MBA in Supply Chain Management Program? Prospective supply chain management students can narrow their choices to the most high-quality online programs using several factors. Researching a program's graduation rates, faculty qualifications, and graduate placements helps students identify quality programs. For example, many programs track the percentage of graduates working in their field. Prospective students can compare programs by identifying those with the highest-graduate placement rates. Fortunately for students, the accreditation process evaluates these factors when granting accreditation. To earn accreditation, programs must meet high standards for academic excellence. Independent accrediting agencies also evaluate criteria like student learning outcomes, graduation requirements, and course content to grant accreditation. In business, specialized accrediting agencies evaluate MBA programs, including the Association to Advance Collegiate Schools of Business (AACSB) and the Accreditation Council for Business Schools and Programs (ACBSP). Unaccredited programs should raise a red flag for prospective supply chain management students. The application asks for financial information, including the expected cost of the MBA program, to determine a financial aid package. Many professional organizations grant scholarships to supply chain management students. The Institute for Supply Management, for example, offers a supply chain management scholarship. Unlike loans, recipients do not need to repay scholarships, making them an attractive option for MBA students. Students can find many MBA scholarship opportunities posted online. MBA programs often grant scholarships to attract and retain top students. At Washington University in St. Louis, for instance, MBA students receive scholarships through the Olin Business School to fund their degree. These scholarships can save prospective MBA students thousands on the cost of a degree. A graduate assistantship provides a salary and sometimes a tuition waiver for MBA students. During the graduate assistantship, recipients may provide teaching or research assistance to faculty members. George Mason University, for example, grants graduate assistantships to admitted MBA students which provide a full tuition waiver.
