To add indicator to MT4 mobile you need to do these steps: #1 step - position yourself on the chart of desired symbol #2 step - click f sign in the top right corner of your mobile screen #3 step - in the list of indicators you need to select which indicator to add to the chart #4 step - then you need enter settings for that indicator if it is needed #5 step - and then click on the DONE button in the right corner of your screen Now I will show you a more detailed guide on how to add trading indicator and I will show you examples with few indicators. On the chart in the upper right corner of your mobile screen you will see f sign. That sign represents an indicator menu with indicators that can be added to the MT4 mobile. When you enter the indicator menu on MT4 mobile then you can select which indicator you want to have. If the indicators have settings that must be set up before placing it on the chart you will need to enter them or use general settings. In this example I will use the moving average to show you how to add an indicator to the chart. When you are done with settings click on the DONE button in the upper right corner of your MT4 mobile application. And that is all. You will see your indicator on the chart directly. It can be in a separate window below or on the chart with candlesticks. That depends on the indicator you use. Now I will show you an example how to add one of the indicators to MT4 mobile. Process of adding EMA is the same as the above explained when adding SMA. You need to position yourself on the chart. Click on the f sign in the top right corner and a new menu will appear. Here you can select which indicator you want to add. From the list select Moving Average. Now you have a window with settings for the moving average. You need to select the exponential moving average from the drop down menu. Drop down menu is under the Method option where you can select other types of moving average. When you are done putting all desired settings on the EMA you need to click on the DONE button in the top right corner. That way you will confirm selected settings and you will add EMA to MT4 mobile. Below is the image with the EMA indicator on the MT4 chart. You can see the red line which represents the EMA indicator. Add RSI indicator on MT4 mobile is simply with few steps and those are: #1 Step - go to indicator menu by clicking f sign on the chart You will enter an indicator menu where you will have a list of current indicators on your chart. Currently I have an EMA indicator which is listed under Moving Average indicator like on the image below. #2 Step - by clicking f+ sign you will enter into the indicators list. Go down to Oscillators where RSI is located. Select RSI indicator and new menu will show up #3 Step - select desired settings for the RSI indicator and when you are done click on the DONE button #4 Step - And that is it. You have an RSI indicator on MT4 mobile. The RSI indicator is below the chart in a separate window. As in the desktop version of MT4 RSI has separate window for easier using of indicator Add MACD indicator on MT4 mobile is simply with few steps and those are: #1 Step - go to indicator menu by clicking f sign on the chart You will enter an indicator menu where you will have a list of current indicators on your chart. Currently I have an EMA and RSI indicator. #2 Step - by clicking f+ sign you will enter into the indicators list. Go down to Oscillators where MACD is located. Select MACD indicator and new menu will show up #3 Step - select desired settings for the MACD indicator and when you are done click on the DONE button #4 Step - And that is it. You have a MACD indicator on MT4 mobile. MACD indicator is below the chart and RSI in a separate window. As in the desktop version of MT4 MACD has a separate window for easier use of indicators. But there is an option to have MACD in the same window as RSI. This option I have shown in the video which you can find at the start of this article. To modify indicator on MT4 mobile you need to take these steps: #1 Step - go to the menu where all indicators on the chart are listed. That is done by clicking f sign on the chart and you I get menu with three indicators which I have on the chart #2 Step - select which indicator you want to modify. I will select the RSI indicator and the settings menu for the RSI will show up. In this menu change what you want and confirm changes by clicking DONE button And that is it. If you want to change any other indicator settings simply repeat the same steps as described above. To remove indicators from the MT4 mobile you need to take these steps: #1 step - position yourself on the chart of desired symbol #2 step - click f sign in the top right corner of your mobile screen and you will get a list of all indicators on the chart #3 step - In the top right corner click on the Trash icon and new option will show #4 step - click on the checkbox next to each indicator you want to remove #5 step - confirm your selection by clicking on the Trash icon in the top right corner And that is it. You will remove those indicators from the chart and you will have only one indicator left. I will use an image where I have all three indicators on the MT4 mobile and I will remove the RSI and MACD indicator. When you click f sign in the top right corner of your screen you will get a list of all indicators you have currently on the chart. I have three of them because I have added EMA, RSI and MACD indicators on the MT4. Now you need to click on the Trash icon in the top right corner to get the checkbox next to each indicator. Image below shows you what that looks like in an MT4 mobile. I will select the RSI and MACD indicator to remove them from the chart. If you want you can select only one indicator or you can select all of them to remove them from the chart. After selecting which indicator to remove you need to click on the Trash icon in the top right corner and selected indicators will be removed. Now I have only one indicator left, EMA. To get out from this menu you need to click on the arrow pointing to the left in the top left corner. Doing that you will go back to the chart with only one indicator on it. This is it. Simple process of removing indicators from the MT4 mobile. I hope this guide has helped you. If you have any questions feel free to ask. If you want to remove the last one indicator on MT4 mobile you simply repeat the same process. To add a custom indicator on MT4 mobile is not possible because creators of MT4 mobile version did not plan to make it available. One of the options to add a custom indicator is to use a tablet with windows and install MT4 on it. That way you will have the same version like on the PC where you will be able to install custom indicators. The same way you add just one indicator. Look at the drop down menus at the top left corner of your window. click on Insert -> Indicators -> Trend -> Moving Average. If you want to add a second Moving Average you repeat the same actions, but you obviously change the properties of the second MA. You do the same with any other indicator you want to add to your chart. You can put as many indicators as you want in the same chart, until it's lit up like a Christmas tree. Still, I'd recommend putting few enough indicators to actually see the chart. Keep in mind that the more indicators you use, the bigger the chance for them to give you contradicting signals, so it's best to use 2-3 at most. Page 2 William Roeder 2020.10.03 14:57 #17 Don't Hijack other threads for your off-topic post. Next time, make your own, new, thread. MAs work because they just need one series. Ichimoku is based on [Max(H) - Min(L)]/2. Can't be done. Anyone can please advice Off-topic posts help fixing an error Page 3 William Roeder: No such thing as a "Indicators List.". There is the Insert -> Indicators popup and the Navigator Window. You drag from the latter. How To Ask Questions The Smart Way. 2004 Be precise and informative about your problem I believe we are seeing different things. EDIT: Images appear while editing but they disappear when I post ... trying to find a way to put here (please wait until final edit).EDIT: Only managed to attach Images. I do not know how to put them visible without having to open the attachments... Apologies.What I see when adding a new indicator on the chart: 1. (select from the available Indicators list)MainMenu -> Insert -> Indicators -> Oscillators -> RSI (Example) 2. (set the parameters of the indicator) 3. (indicator added on chart, extra window) Extra window appears on the lower part of the Chart. I cannot drag anything into it. Now, if I want to change the Indicator parameters I go here: 4. (select from active indicators)MainMenu -> Charts -> Indicators List 5. (Indicators List pops up)I cannot drag or change window on any indicator that I put here (even if same scale of values). What am I doing wrong here? Thanks. -- AC Hello everybody, does anybody know how to load two or more indicators on MT4 in one indicator window? If I add an additional indicator to the chart, a new indicator window is opened but how can I load an additional indicator overlapping with another indicator in one window? (this happened automatically on my mobile phone MT4 when I loaded more indicators, fortunately the intersection of those two indicators seems to create good entry signals, so I want to have the same constellation on my laptop. Thanks! Just click on the second indicator and drag it into the open indicator window. Thanks, but how should this work because when I click menu=insert=indicator=choose an indicator automatically is in a new window. It is not possible to drag an indicator from the menu in a window or from one window in another window? First - "View", then choose "Navigator". Now with no indicator window open - just the chart/price - select one indicator, it will then appear at the bottom of the MT4 chart in a window of it's own. Now select a second indicator (left click - keep the mouse button down) and drag over to the indicator window at the bottom - the second indicator will now open in that same window. I Like That's great, it works. Thanks a (standard) lot! I Like The benefit of MT4 and MT5 is that they can quickly and easily be used on many different devices including Android, iPhone and Mac. The mobile platforms have over 30 indicators that can be used on both the MT4 / MT5 Android and iPhone. This post looks at the available indicators in the MT4 / MT5 android and iPhone platforms as well as how to connect your account and start using them. MT4 / MT5 Android and iPhone Trading The Android and iPhone MT4 and MT5 platforms come with a range of features that include: Control over your trading accounts along with syncing accounts. Mobile trading from anywhere at any time. All order types are available. Check your trading history. Use three different charts including: bars, Japanese candlesticks and line charts. Range of time frames from one minute to one month. 30 technical indicators. Ability to check news. Free chat and email. Indicators Available on MT4 Android and iPhone MT4 offers you a wide range of indicators on your Android and iPhone. These include: Accelerator Oscillator Accumulation/Distribution Alligator Average Directional Movement Index Average True Range Awesome Oscillator Bears Power Bollinger Bands Bulls Power Commodity Channel Index DeMarker Envelopes Force Index Fractals Gator Oscillator Ichimoku Kinko Hyo MACD Market Facilitation Index Momentum Money Flow Index Moving Average Moving Average of Oscillator On Balance Volume Parabolic SAR Relative Strength Index Relative Vigor Index Standard Deviation Stochastic Oscillator Volumex Williams Percent Range Indicators Available on MT5 Android and iPhone Similar to MT4, MT5 offers you a wide range of indicators on your Android and iPhone. These include: Moving Average Force Index Accelerator Oscillator Bollinger Bands Momentum Awesome Oscillator Average Directional Movement Index Moving Average of Oscillator Gator Oscillator Envelopes Relative Strength Index Alligator Ichimoku Kinko Hyo Relative Vigor Index Market Facilitation Index Standard Deviation Williams Percent Range Parabolic SAR Average True Range Accumulation/Distribution Fractals Bears Power Money Flow Index MACD Bulls Power On Balance Volume Stochastic Oscillator Commodity Channel Index Volumex DeMarker How to Add Indicators on Android and iPhone Similar to using an indicator on your Metatrader PC platform, an indicator can be placed directly on your chart or attached below (for example when using an oscillator indicator). The first thing you need to do is either create a free account inside the Metatrader mobile platform or connect your existing account. NOTE: If you do not yet have a free MT4 or MT5 account you can get one here. To connect your existing account that you have created through your broker follow these instructions; Open your MT4 / MT5 mobile platform. Click on 'settings' and 'manage accounts'. Click on the + symbol to add your existing account. Choose 'login to existing account'. Search for your broker and then select them. Enter your login and password and then sign in. To add indicators to your mobile trading platform follow these instructions; Open your MT4 or MT5 mobile platform. Open the chart you wish to apply the indicator to. Select the symbol. You will then have two options. You can either add an indicator to the main chart or to the indicator window. Select the symbol and choose from the range of indicators. Select the indicators parameters you wish to use and hit done to apply it. How to Remove Metatrader Mobile Indicators To delete any indicators you no longer want applied first hit thesymbol. Select the delete symbol and you will be able to tick the indicators you want to remove. Once the indicators you want deleted are selected hit the delete button again and they will be removed. How to Modify indicators To modify and change the parameters for any indicators you already have applied first hit the indicator button to bring up your indicators. Select the indicator you wish to customize and you will be presented with the options you can change. Make your changes and select 'done'. How to Use Custom Metatrader Indicators in Android and iPhone At this point in time adding or using custom indicators such as the 1,2,3 pattern indicator or auto Fibonacci indicator is not a built in function. The most common workaround that traders use to have these types of indicators available is by either using a Microsoft based tablet or mirroring their computer to their phone. Whilst using a Microsoft tablet that allows the full functions of Metatrader is an easier option, it also defeats the purpose of mobile trading. When setting up mirroring you are able to access your full suite of Metatrader tools that your computer is running including all of the custom indicators. Read how to set up remote computer mirroring here. As a trader, understanding the market and properly analyzing price movements is crucial for making informed trading decisions. One way to gain better insights into the market is by using indicator windows in MT4.Indicator windows are separate panes on the MT4 platform that display various technical indicators, such as moving averages, oscillators, or trend lines. Combining these indicator windows can help traders identify trends, reversals, and potential entry or exit points.Table Of ContentsIn this step-by-step guide, we will explain how to combine indicator windows in MT4. By following these instructions, you will be able to create a comprehensive view of the market, enhancing your trading strategy and decision-making process.Before we dive into the process, make sure you have MT4 installed on your computer and have chosen the indicators you want to include in your analysis. Once you are ready, let's get started!What is MT4 and how does it work?MT4, or MetaTrader 4, is a popular trading platform used by traders worldwide. It provides a user-friendly interface for online trading in various financial markets, including Forex, Commodities, and Indices.MT4 works by connecting traders to their chosen broker's trading servers through the internet. Traders can download and install the MT4 software on their computer or use the web version, depending on their broker's offerings.Once connected to the broker's trading servers, traders can access real-time market quotes, analyze charts, place trades, and manage their accounts. MT4 provides a wide range of technical indicators and charting tools that traders can use to analyze price movements and make informed trading decisions.Traders can customize their MT4 platform by adding and arranging indicator windows according to their preferences. These indicators can help traders identify trading opportunities and determine entry and exit points.MT4 also supports the use of automated trading systems, known as Expert Advisors (EAs), which can execute trades on behalf of the trader based on predefined rules and strategies.In summary, MT4 is a versatile trading platform that provides traders with the necessary tools to analyze markets, place trades, and manage their accounts. It is widely used due to its user-friendly interface, extensive charting capabilities, and support for automated trading.Understanding the MT4 trading platformThe MT4 trading platform is a popular choice for both beginner and experienced traders due to its user-friendly interface and comprehensive range of features. Here are some key aspects to understand about the MT4 trading platform:1. User Interface: The MT4 platform offers a simple and intuitive user interface, making it easy for traders to navigate and execute trades. The main screen consists of multiple windows, including the market watch, chart, navigator, and terminal windows.Read Also: Discover the IFA Business Fee: All You Need to Know2. Charts: The platform provides a variety of chart types, such as line, bar, and candlestick charts, which allow traders to analyze price movements over different timeframes. Traders can also customize chart settings, apply technical indicators, and add trendlines to make informed trading decisions.3. Indicators: MT4 offers a wide range of built-in technical indicators, such as moving averages, Bollinger Bands, and MACD, which can be applied to charts to identify potential entry and exit points. Traders can also create their own custom indicators using MQL4 programming language.4. Expert Advisors: MT4 allows traders to automate their trading strategies by using Expert Advisors (EAs). EAs are custom programs that can analyze market conditions, place trades, and manage positions automatically based on predefined rules. Traders can either create their own EAs or use existing ones.5. Order Execution: The MT4 platform provides various order types, such as market orders, limit orders, and stop orders, allowing traders to execute trades based on their preferred strategy. Traders can also set take profit and stop loss levels to manage their risk.6. Historical Data: MT4 provides access to historical price data, allowing traders to backtest their trading strategies and analyze past market movements. This data can be used to identify patterns, test different approaches, and improve trading decisions.FAQ:What is MT4?MT4 stands for MetaTrader 4, which is a popular trading platform used by forex traders around the world.How can I combine indicator windows in MT4?To combine indicator windows in MT4, you can follow the step-by-step guide provided in the article. It explains how to open multiple indicator windows in the platform and adjust their placement.Why would I want to combine indicator windows in MT4?Combining indicator windows in MT4 allows you to have a more comprehensive view of the market. By placing multiple indicators in different windows, you can analyze different aspects of the market simultaneously and make better trading decisions.Can I customize the appearance of the indicator windows in MT4?Yes, you can customize the appearance of the indicator windows in MT4. The platform offers various customization options, such as changing the color, line style, and thickness of the indicators, to suit your preferences.Is it possible to save the layout of indicator windows in MT4?Yes, you can save the layout of indicator windows in MT4. This allows you to quickly load your preferred configuration of indicator windows whenever you open the platform.What is MT4?MT4 stands for MetaTrader 4, which is a widely used trading platform for forex and CFDs. It allows traders to analyze financial markets, perform technical analysis, and execute trades.See Also: William Roeder: No such thing as a "Indicators List.". MAs work because they just need one series. Ichimoku is based on [Max(H) - Min(L)]/2. Can't be done. Anyone can please advice Off-topic posts help fixing an error In forex trading, to be successful you need to support tools such as charts, technical indicators, etc. These technical tools will help you predict future price action and find good opportunities to trade and make trading decisions at the right time. In addition to the indicators provided on MT4 mobile, you can add other custom indicators to improve the efficiency of analysis and trading. This article will show you how to add custom indicators to the MOBILE MT4 platform (iPhone, iPad and Android). When do I need to install custom indicators? An indicator is a technical tool that provides crucial market states on a chart and helps predict future price activity. When trading on MetaTrader 4, you will be provided with several specific indicators pre-installed on the platform. You can use them to perform chart analysis. However, such instruments cannot in many cases meet the needs of all investors. Therefore, you need to know how to accurately add custom indicators from custom sources to meet your needs. So, how do you add custom indicators to MT4? It is too complicated to use custom indicators in conjunction with the existing tools on the platform? MetaTrader is programmed with the MQL4 language that allows you to freely add any MT4 compatible indicator to the platform in less than a minute! In addition, you can install as many indicators as you want to create a new strategy or update an existing one. In this guide, we've thoroughly explained how to add the indicator to all versions of MT4 mobile software, including iPhone (iOS) and Android. How to add custom indicators to MT4 iPhone? MT4 does not allow the addition of custom indicators in the iOS version. However, you can still install custom indicators via iPhone or iPad via remote connections to your PC. Specifically, the steps are as follows: Step 1: Device Settings allows you to connect your mobile device to your PC remotely. Then, by connecting to your computer, you will have full access to the desktop version of MT4 and will be able to use custom MQL4 indicators from any iOS device. The best iOS apps you can use for remote desktop connection are: TeamViewer Remote Desktop LogMeIn Method GoToMyPC JumpDesktop Step 2: Open MT4 (desktop) > Go to Navigator -> double-click Indicators to expand the list of indicators. Step 3: Double click on the indicator you want to add to the chart and press OK. This way, you will be able to add and use MQL4 custom indicators in both MT4 and MT5 platforms from your iOS device. How to add custom indicators to Android MT4? Like iPhone or iPad, MT4 also does not allow you to add custom indicators to Android devices. To add custom indicators to MT4 on Android, follow these steps: Step 1: Connect your Android phone/tablet to your PC using the remote desktop app. The Android apps you can use to connect to a remote computer are: AnyDesk Remote Control TeamViewer Remote Control Chrome Remote Desktop Remote Desktop 8 (Microsoft) Splashtop Personal Remote PC Step 2: Click indicators > Go to Customization > Select the custom indicator you want to add to MT4: Step 3: If necessary, change the custom settings of the indicator in the properties window and click OK. You will see that the custom indicator has been added to your chart and starts working at the same time. It can be said that, in perfect trading conditions, you can need one of the indicators available on MT4 and trade on the signals that the indicator gives. However, the reality is that the market always has unexpected fluctuations, so many traders want to look for custom indicators or combine different indicators to get more accurate trading signals. Indicators in MT4 and MT5 platforms are beneficial for the majority of traders. Indicators can remove noise from the data, point to essential breakouts, and show divergence We have default indicators in MT4 and MT5 Android apps, which is enough for most traders. However, one of the main questions is whether we can add custom indicators to the MT4 app.You can not install custom indicators on the MT4 Android platform because Android and iOS platforms do not allow changing the app's code, and any preprogramming of the installed app is not allowed. However, you can install Windows MT4 on VPS, add custom indicators, and access it with an Android phone.Trillion Dollar Club - Invest & Trade Stocks, Crypto, ForexExpert advisors, scripts, and indicators can not be added to the app, only to the MT4 or MT5 desktop platform.See below my video that I made on youtube related to this topic:How to install the MT4 App on VPS and add custom indicators?Obtain a Free VPS from Your Broker:Many brokers offer their clients free VPS hosting, especially those who maintain a certain account balance or trading volume.To get a free VPS, contact your broker's support or check their website for information on the criteria.Once you are eligible, the broker will usually provide details on accessing the VPS.VPS Access Details:After you've obtained the VPS, the broker (or the VPS provider) should provide you with the following information:IP Address of the VPS.Username (often "Administrator" for Windows servers).Password.Install MT4 on the VPS.Connect to your VPS using a Remote Desktop Client on your computer. You can use the built-in "Remote Desktop Connection" tool for Windows.Once connected, open a browser on the VPS, go to your broker's website or the official MT4 website, and download the MT4 platform.Install MT4 as you would on a regular computer.Add Custom Indicators to MT4 on VPS:If you have the custom indicator files (.mq4 or .ex4) on your local computer, you can transfer them to the VPS by copying and pasting them over the remote desktop connection or using a file transfer tool.Once transferred, open MT4 on the VPS.Navigate to "File" > "Open Data Folder" > "MQL4" > "Indicators".Paste the custom indicator files in this folder.Restart MT4 to ensure the custom indicators are loaded.Connect from Android Phone using Remote Desktop:On your Android phone, go to the Google Play Store and download an app called "Microsoft Remote Desktop" or any other remote desktop app you prefer.Once installed, open the app and add a new connection. Enter the IP address, username, and password provided by your broker for the VPS.Connect to the VPS.Once connected, you will see the VPS's desktop and can open MT4 from there.Access and Use MT4 with Custom Indicators on Android:You can access the MT4 platform installed on the VPS with the remote desktop app. It's like accessing a computer remotely.You can open charts, apply custom indicators, and trade as you would on a desktop version of MT4.Note: Using MT4 over a remote connection on the phone might be a bit clunky due to the small screen size. It's often used for monitoring and quick tasks, but for in-depth analysis, using a tablet or a computer is recommended.Trillion Dollar Club - Invest & Trade Stocks, Crypto, ForexYou can add custom indicators on the MT4 desktop easily, like in this image below:Manage \$300 000 Account. Earn as trader!Will we be able to install custom indicators in MT4 Android in the future?No. Developers in the MetaTrader space realize that professional traders only use expert advisors, custom indicators, and scripts on Desktop Metatrader platforms. The mobile device is for monitoring and sometimes for closing or opening new positions. Current indicators are entirely enough for trading.However, some brokers plan to add new indicators in the trading app, so in the future, we will see more and more indicators, so there will be no need to add custom indicators from our side. Trillion Dollar Club - Invest & Trade Stocks, Crypto, Forexlink to Delta Volume Flow and Low Volume Profile Zones in Futures Tradinglink to Rising Japanese Inflation Signals Yen Strength: Is a USD/JPY Downtrend Coming? AI W 2009.12.03 04:52 #3 Sorry, but it IS possible. How meaningful is really up to the person experimenting. The moving average adapts to the indicator it is averaging. So it doesn't care what scale its on, it just averages. Very simple. I did forget to mention that after you drag the moving average onto the RSI(the only way the combination will work), you must change the portion that says "apply to:" instead of close, change it to Previous indicators data or First Indicator data. Sorry, but this is not possible on my MT4-platforms (Forex4you-broker, GoMarkets-broker). The app to field does not show "Previous indicators" or "First indicator". It only shows Close, Open, High, Low etc. but nowhere it shows the Previous indicator or First indicator. This is it is impossible for me to have the MA on the same chart-window as the RSI. It looks like on some MT4-platforms this is different, but I have no luck. What broker do you use? Maybe I can download the platform and copy the Moving Average indicator from there. Thanks Taskin Osman 2009.10.27 21:11 #1 #property indicator .separate .window instead of #property indicator .chart .window but you cannot add different indicators to same separate window unless you combine all indicators to 1 indicator script. Check Alligator indicator and simply change its property and you will see 3 ma on separate window fx1.net
