# Factorial for negative numbers

Can you factorial negative numbers. Can factorial be negative.

Write a C program to insert a number and calculate your factor using the loop. How to find a number of a number in the C program using loop. Logic to find factorial of a number of programming C.ExampleInputInput: 5OutputFactorial: 120 DreatersBasic C programming, for Loopwhat is factorial? Factor of a number n is the product of all positive integers lower or equal to n. It's denoted like  $N!$ . For the factorial example of  $5 = 1 * 2 * 3 * 4 * 5 = 120$ Logic to find a number of a NumberStep by the descriptive rule of step to find a number.Input a number of a user. Store in some variable Say num.Initialize another variable that will store factorialy say facts = 1. Why initialize fact with 1 not with 0? This is because you need to perform the multiplication operation does not add. Multiplying 1 for any same result, the same as somathury of 0 and any other number results Same.Run a 1-to-nm loop, an increase in each iteration. The loop structure must appear to  $(i = 1; i$
