#1 home improvement retailer hampton bay ceiling fan troubleshooting guide hampton the ceiling fans of the bay are built to give you years of service, but things can go wrong. Is your fan too noisy, not blowing air or just not working? our home depot hampton bay ceiling fan troubleshooting guide gives you 11 classic problems and tells you what to do to fix your fan. You can also check your hampton bay ceiling fan manual for more ideas. shop hampton bay ceiling fans nowjump to specific Section1Why not fan start? if your ceiling fan has stopped working: check the switch from your home to see if it's working properly. check the cable connections on your hampton bay ceiling fan by turning off the power. Then open the fan to check if your home's supply cables and fan wires are connected correctly. 2Why the noisy fan? hampton berry fans are designed to work quietly, but if your fan is making a lot of noise oted must: tighten all the engine housing screws. tighten the screws that hold the fan blade support to the engine center. tighten the screws and make sure the lamp's glassware. screw bulbs safely. if your ceiling fan is still noisy, turn off power and then: check the wire walnut connections. they may be waving against each other or against the wall of the switch housing. check the rubber pads between the assembly plate and the output box. Take a look at the ceiling exit box and make sure it's safe. Check the remote control. pass the receiver and connect the fan directly to the switch. If the noise stops, then the receiver may need to be replaced. If the noise continues, your capacitor can be the problem. suggestion: if your fan is new, give it 24to "romper" before trying to correct any noise problems.3 Why the Fan Wobble? First, try these arrangements to correct a wobbling ceiling fan. Let the fan run for 10 minutes after each fixing to self-adjust. Secure the screws in the binding box, in the bar below, in the blades and the blade holders. blade.sure that the blades are firmly attached to the supports and the supports to the engine housing. The blades should be within 1/8 inch of each other, so make sure they are level. Do this by measuring the distance between the roof and the tip of the blades. Then measure from the center of each leaf to the point on the roof. Turn the next blade into position and measure it. Repeat until you have measured all the blades. If the deviation is greater than 1/8 inch, try with a balance kit. Most fans include a balance kit or you can buy one separately. If the deviation is greater than 1/8 inch and the fan is still knitting, try using a balancing kit. Most fans include a balance kit or you can buy one separately. 4 Why isn't the remote work? If your Hampton Bay Ceiling Fan doesn't work, try these troubleshooting steps. He may be out of range. Always be 10 to 20 feet from the fan when using your remote control. Dead batteries are usually the reason. Try to replace them. Make sure that both the receiver and the remote are fixed at the same frequency. Turn off your power supply. Set the code on the remote control by sliding the change code up or down. Slide the code changes into the receiver to the same position. If none of the above solves your problem, you may need a replacement remote control and/or receiver. Tip: If you are trying to use a universal remote control, you should know that fans with DC motors only work with remote controls specifically designed for DC motors. Refer to your owner's manual on how to pair your DC fan with your DC remote control. If your remote control does not yet control your fan, contact customer service. 5 Why doesn't the light work? If your Hampton's fan light from the bay does not work: try to check the bulbs to make sure they are screwed properly. replace any bulb that doesn't work. restart your remote control. First, turn off the power. Then remove the batteries from the remote control and wait 10 seconds. replace the batteries and turn on the power again. 6 Why whyThe fan blows air? Make sure the blades are installed in the correct direction. If your ceiling height is 10 or more feet, your fan should not be installed too close to the ceiling. A lower rod is needed for high ceilings to guarantee an adequate air flow. Check the distance from your fan to the floor and look at the owner's manual for the recommended size of the rod. And replace it if necessary. Make sure that the inverse switch of your fanatic is in the correct position for the season. For example, a ceiling fan should turn left in the summer, so that the blades push the air from the refrigerator down into a column. The rotation counterclockwise is typically set by pressing the directional switch on the side of the motor housing down, but you may need to verify the instruction manual of your fan to confirm. Get more information about how to adjust your fan with our roofing fan address guide. Why does not the engine work? Hampton Bay ceiling fan rarely have engine problems. First, discard any energy problem when you see if your lights work. If they do, contact Hampton Bay's customer service at 855-HD-Hampton (855-434-2678). Why is the fan is twisted? If your fan is not hung down: Check if the downrod is installed securely inside the support assembly so that it is not stirred while it is going back. Make sure your rod is down the right diameter for your fan and length for your ceiling height. Check the owner's manual or call customer service from the Hampton Bay ceiling fan at 855-HD-Hampton (855-434-2678). Why do not they fit the bulbs. The candelabra bulbs come in different sizes. If yours are too big or too to fit into the ceiling fan light kit, check the user manual for the recommended size. Smoke or fire is an indication that your fan is damaged or your capacitor or receiver needs to be replaced. Please refer to your Hampton Bay Ceiling Fan Manual for warranty information. 11 Why do the blades lean? The most common reason Droop fan blades is that the fan is being used outside when it is not qualified for outdoor use. Heat, humidity and other climates can avoid blades. Replaces the blades and move the fan inside. Check here for replacement blades and other Hampton Bay ceiling fan parts. 12 Why did the stroke? Not all fans are compatible with wall regulator switches. This is especially true with CCT LED or detachable integrated lights. These types can Flicker even if the wall dimmer is fixed on a full 100% brightness. If the light premieres in your fan, change the wall switch. Change.
