1. Gather these settings for your wireless network: SSID or Network Name The name of your Wireless Network or Access Point Network Security Key (Password) Encryption Key, WEP Key, Passphrase If you're not sure about any of these settings, we may be able to help you find them. Click here for assistance. Some access points and routers have both a primary and guest network. Guest networks allow access to the network Internet connection, but restricts direct access to the network. The Brother machine should be setup on the primary network and not the guest network. 2. Download and install the printer driver, which can be downloaded from . Click here for instructions. 3. After the printer driver installation, download and run the Wireless Device Setup Wizard from . Go to step 5. 4. The Wireless Device Setup Wizard will crash if you try to double click the icon to run the installation. You can install it using Terminal. a. Hold down the Control key and click Wireless Device Setup Wizard, select Show Original. b. Hold down the Control key and click Wireless Device Setup Wizard from the list and select Show Package Contents. c. Open the folders Contents → MacOS and double click SetupWizard. d. The Wireless Device Setup window will appear. 5. If you receive a security warning about opening the application, click Open. 6. Choose Yes. I have a USB cable to use for installation and then click Next. 7. If the Important Notice window appears, confirm your SSID and Network Key, place a check next to Checked and confirmed and then click Next. 8. When prompted, temporarily connect the USB cable (not included) directly to your computer and your label machine. Make sure your label machine is powered on. 9. The list of available wireless networks is displayed, choose your network name and then click Next. If the list is blank, check that the router is turned on, broadcasting the network name, and that it's within range for wireless communication. You may need to cycle the power to the router for about 15 seconds to reestablish communication and then click Refresh. 10. Enter the Network Key and then click Next. 11. On the Wireless Network Settings Confirmation screen, click Next. The settings will be sent to the machine. 12. When prompted, disconnect the USB cable from your computer and your machine and click Next. 13. Choose your machine from the list, and then click Next. If you don't see your machine in the list, make sure that your computer is connected to the same network as your Brother machine and try again. If the machine is still not listed, you will need to cycle the power to the router for about 15 seconds to reestablish communication. Once the router restarts, wait about a minute and then try again. 14. Click Finish. 15. Add the printer, click here. This guide shows how to set up a wireless (Wi-Fi) network between your Brother machine and your PC or mobile device. Follow this guide to set up a wireless (Wi-Fi) network between your Brother machine and your computer or mobile device. We will show you the best configuration method based on your answers to the two questions below. Once your printer and computer are on the same network, you will need to download and install the Brother printer driver on your computer. Once you have downloaded and installed the printer driver, you will need to open the Brother printer software on your computer. In the "Wireless Setup" window, you will need to select the wireless network that you want to use for your printer. Setting up a wireless connection on your Brother HL-L2350DW printer is a straightforward process. With just a few steps, you'll be able to print wirelessly from your computer, smartphone, or tablet. In this article, we'll walk you through the setup process and answer any questions you have along the way. Let's get started! A wireless network setup for your Brother HL-L2350DW printer can be completed by following these easy steps. Before proceeding, first ensure that your Brother printer and computer are connected to the same network. If they are not, you will need to connect them using a wired connection before proceeding. Next, make sure that your printer and computer are connected to the same wireless network. If they are not, you will need to connect them using a wired connection before proceeding. Once your printer and computer are on the same network, you will need to download and install the Brother printer driver on your computer. You can find the driver on the Brother website. Once you have downloaded and installed the printer driver, you will need to open the Brother printer software on your computer. You can find this software on the Brother website. Once you have opened the Brother printer software, you will need to click on the "Setup" tab. In the "Setup" tab, you will need to click on the "Network" tab. In the "Network" tab, you will need to click on the "Wireless Setup" button. In the "Wireless Setup" window, you will need to click on the "Setup Wizard" button. In the "Setup Wizard" window, you will need to click on the "Next" button. In the "Wireless Setup" window, you will need to select the wireless network that you want to use for your printer. Once you have selected the wireless network, you will need to enter the password for the wireless network. Once you have entered the password, you will need to click on the "Next" button. In the "Wireless Setup" window, you will need to click on the "Finish" button. Once you have completed the wireless setup, you will be able to print wirelessly from your Brother HL-L2350DW printer. 1. Make sure your Brother HL-L2350DW printer is turned on and connected to your computer. 2. Open the printer's menu and select "Network" or "Wireless." 3. Choose "WLAN" or "Wireless LAN Setup Wizard" to begin the setup process. 4. Follow the instructions on the printer's screen to connect to your Wi-Fi network. 5. Once connected, you should be able to print wirelessly from your computer or mobile device. A printer is one of the most useful devices in your home or office. It helps in printing documents, pictures, and other important files. However, sometimes you may face issues with your printer. One of the most common problems is connectivity issues. Your printer may not connect to your Wi-Fi network. Here are some reasons why your brother printer may not connect to Wi-Fi: 1. Outdated firmware: * Your printer's firmware is the software that runs its hardware. If it's outdated, your printer may not be able to connect to your Wi-Fi network. * To update the firmware, you'll need to visit the manufacturer's website and download the latest firmware for your printer. 2. Weak Wi-Fi signal: * If your Wi-Fi signal is too weak, your printer may not be able to connect to it. Try moving your router closer to your printer and see if that helps. 3. Wi-Fi password: * If your Wi-Fi password has been changed, your printer may not be able to connect to it. You'll need to enter your new password on your printer's control panel. 4. Wi-Fi interference: * Other devices in your home or office may be interfering with your Wi-Fi signal. Try turning off any devices that may be causing interference and see if that helps. 5. Network settings: * Your printer's network settings may be incorrect. To fix this, you'll need to visit the manufacturer's website and download the latest network settings for your printer. If none of these solutions work, you may need to contact your brother printer support center for assistance. To reset your brother printer to factory settings, follow these steps: 1. Press the menu button on your printer. 2. Use the up and down arrow keys to select "Set Up" and then press OK. 3. Use the up and down arrow keys to select "Initial Setup" and then press OK. 4. Use the up and down arrow keys to select "Restore Factory Defaults" and then press OK. 5. Press the start key to begin the reset process. 6. Your printer will restart and the factory default settings will be restored. Note: This process will erase all custom settings on your printer, including network settings, fax settings, and any custom paper sizes. Updating the firmware on a Brother printer is a simple and straightforward process. Here are the steps to follow: 1. Connect your printer to a computer using a USB cable. 2. Open a web browser and go to the Brother website. 3. Search for your printer model and go to the support page. 4. On the support page, you will find the latest firmware version available for your printer. 5. Download the firmware file to your computer. 6. Once the download is complete, locate the file and double-click on it to start the installation. 7. Follow the on-screen instructions to install the firmware. 8. Once the installation is complete, your printer will restart and the firmware will be updated. It's important to note that you should always keep your printer's firmware up to date to ensure optimal performance and to fix any bugs or security issues. Why Won't My Brother Printer Scan To My Computer? Brothers printers, like other models, occasionally have problems scanning. This article will show you how to troubleshoot the problem and get your printer back up and running. Restart Your Computer Restarting your computer can resolve a variety of issues. Turn your computer off completely, then restart it. Once your system boots back up, try scanning again. Check Your Printer Connection Make sure your printer is powered on and connected to your computer. Check the printer cable and make sure it's securely plugged into both the printer and your computer. If your printer is wireless, make sure your computer is connected to the same network as the printer. Update Your Printer Drivers Brother printers require updated drivers to work properly. Go to the Brother website and download the latest drivers for your printer. Install them on your computer, then try scanning again. Check Your Scanner Connection Make sure your scanner is connected to your computer. Check the printer cable and make sure it's securely plugged into both the printer and your computer. If your scanner is wireless, make sure your computer is connected to the same network as the scanner. Check Your Scanner Software Make sure you have the correct scanner software installed on your computer. Go to the Brother website and download the latest scanner software. In conclusion, setting up a Brother HL-L2350DW printer on a wireless network is a relatively straightforward process. By following the steps outlined in this blog post, you should be able to get your printer connected and printing in no time. Remember that every device and network is different, so you may have to troubleshoot some issues along the way. But if you take your time and are patient, you should be able to get your Brother HL-L2350DW printer up and running on your wireless network in no time. We've put together a list of places where you can find most anything. Or, you can use search to find something specific.
