Heets blue selection menthol

What are the flavours of heets. Which heets are menthol. What are the different flavours of heets.

The strong products of menthol.Tobacco are destined for electric heating 2.4, 2.4 more, 3.0, multi, 3.0 duo. The sale is held in 1 box (10 packs of 200 sticks of tobacco) .made in the polynia in 1 pack-20 sticks. In a box of 10 packs the liquid weight of the tobacco mixture in a single stick: 6.1 g. Weight 250 g. \pm 1,200.00 \AA \pm 0.00 / shipping calculated at checkout. Heets Blue is a stronger taste of menthol similar to the black menthol of Marlboro. 10packs / ream. Each package contain 20 tobacco sticks Página 2 Página 3. A deep menthol taste, giving a sensation of intense cooling. As you will realize when opening the package, blue tobacco sticks are much smaller than conventional cigarettes and are designed for use exclusively with the IQOS system. Just insert it into the IQ support and press the button until the LED light starts blinking. The tobacco rod is heated at 350 ° C by the heating element with controlled precision within the IQ support, releasing the true taste of the tobacco through a steam containing nicotine without burning tobacco or generating smoke. Each chess package consists of 20 specially created tobacco sticks designed for use with devices and IQOS kits. Each chess throat can be enjoyed for approximately 6 minutes, or 14 puffs (depending on the use), which is similar to that of a cigarette. Flavor notes: \AA menthol I'm hoping this post help someone to try to solve which heets menthol to invest, especially if you're on the IQOS website, like (at least in the UK) they just sell boxes of 10 packets. So in my experience: turquoise: the lightest of the three. I can smell the taste of tobacco more than I can provide it, and the menthol is quite fascinated: the most strongly mental of three. It is not very taste of tobacco here, but the hit is quite strong. The menthol gets very strong to the end. Green: They are quite new, and I think they attack somewhere between the two. I could edit this after a few more samples, but green could be the best place to start if you are trying to change menthol cigarettes to an alternative (menthol). The first time I stopped smoking, I did this using a vape. Honestly, the vape can be quite satisfactory in the volume of things you inhale / expire. HETETs provide less than cigarettes, and definitely less than vaes do. So, if that's what you're looking for, there is an ability of great menthol vape flavors by AA. But if you are looking for a taste of legitimate menthol tobacco, then the heterogether mentors are a great alternative for menthol cigarettes. Mail for a friend Twitter Facebook Pinterest Google Plus Heets tobacco sticks are designed to be used \AA \AA
